

Material Grade (Classification)	Proposed Application	SMC Series Number	BMC Series Number
High Strength	The STC-1000 line takes BMC to the next level of strength by formulating the product with high levels of reinforcement.		STC 1000
High Strength & Corrosion Resistant	The STC-1100 line represents a highly corrosive resistant composite with high strength.		STC 1100
High Strength & Corrosion Resistant	The STC-1200 line represents a custom blend of the STC-1000 and STC-1100 series to yield a unique value proposition.		STC 1200
High Strength	The STC-2000 line represents a traditional thermosetting composite with the added advantage of high glass concentration allowing high strength at a great value.	STC 2000	
High Strength & High Corrosion Resistant	The STC-2100 line represents a highly corrosion resistant thermosetting composite armed with high strength performance.	STC 2100	
High Strength & High Corrosion Resistant	The STC-2200 line is a custom blend of both the STC-2000 and STC-2100 chemistries allowing the composite to be customized for performance and value.	STC 2200	
High Strength & Impact Resistant	The STC-2300 line represents a thermoset technology that utilizes hybrid technology to yield amazing toughness and improved impact performance.	STC 2300	
High Strength, Corrosion Resistant & Impact Resistant	The STC-2400 line yields corrosion resistant properties in addition to high strength, toughness, and improved impact strength.	STC 2400	
High Strength & Low Density Carbon Fiber	The STC-3100 line excels when low density and high mechanical values are desired. The coupling of a highly corrosive composite with the newest carbon fiber options yields versatility and high modulus (stiffness) in a value added package.		STC 3100
